SUBARNA KARKI

Senior SDET | Test Automation Architecture | AI-Assisted Testing | CI/CD Quality Gates

703-627-8332 | subarna.karki13@gmail.com | linkedin.com/in/subarnakarki | github.com/subarnakarki

SUMMARY

Senior SDET with 8+ years of experience building test automation frameworks, developer tooling, and test data infrastructure. Sole QA engineer retained after Polly's 25+ person QA team was eliminated; owned quality end-to-end for ~50 developers and shifted testing to them with Claude Code tooling, self-healing test pipelines, and an on-demand test data platform. Track record of measurable impact: release triage cut from 3 days to 1, ~2,500 test scenarios migrated from Cypress to Playwright in 4 months, nightly pass rate raised from 95% to 99.8%, and nightly regression time cut 85%. The person teams come to when they need to figure out how to test something hard.

SKILLS

Languages: TypeScript, JavaScript, Python, HTML5, CSS3

Test Automation: Playwright, Cypress, Selenium, Jest, Cucumber, Applitools, Page Object Model

Testing: E2E testing, API testing (REST, GraphQL), performance and load testing (Artillery), security testing, visual regression testing, test strategy, root-cause analysis, shift-left testing

AI & Developer Tools: Claude Code, GitHub Copilot, Augment Code, MCP servers (Playwright, Jira, GitHub, Kibana), AI-assisted test generation, self-healing tests

CI/CD: GitHub Actions, Jenkins, CircleCI, Harness; CI quality gates, parallel and sharded test execution

Cloud & Data: AWS (S3, EC2, Lambda, Secrets Manager), Docker, MySQL, PostgreSQL, Grafana, SonarQube, Postman

Certifications: ISTQB CTFL, ITIL V3

EXPERIENCE

Polly

Senior SDET | Sep 2024 - Nov 2026

Only QA engineer kept after the 25+ person QA team was let go in Feb 2026; sole quality owner for ~50 developers from then on.

- Cut release triage from 3 days to 1 day by building Claude Code skills that poll feature teams on automation status in a public Slack release channel and auto-heal broken tests, tracing each failure to its root cause using PR history, Jira tickets, and Confluence pages.
- Migrated ~2,500 test scenarios from Cypress to Playwright in 4 months, an effort estimated at multiple years by hand, by building the Page Object Model and fixture framework, Claude Code migration skills enforcing full assertion and test parity, and PR checks (lint, type-check, fixture coverage).
- Raised the nightly pass rate from 95% to 99.8% by fixing long-standing flaky tests and a pagination bug breaking suites across teams; added a Slack bot that routes each failure to the owning team and pipelines that run tests on every pull request.
- Built a reusable Python test data (seed data) platform, now used by every engineer, that provisions fully configured mortgage org environments on demand across 30+ scenario types (pricing versions, lock policies, investor orgs, products, rules, channels), replacing manual setup that took a day or more per org.
- Rolled out Claude Code to all ~50 developers - CLAUDE.md files covering framework and conventions, MCP servers for Playwright, Jira, GitHub, and Kibana, a skill that migrates hardcoded tests onto the seed data framework, and test-generation skills - and trained developers to write and own their own tests.

- Built a test trends dashboard used by developers, managers, and release engineers, and reworked CI to merge sharded Playwright reports into one report with shared caching across shards.
- Wrote end-to-end Cypress automation for 6+ major Pricing Engine features (Counter Offers, MI Rate Cards, Lock Workflows, and more) that caught real bugs before release, plus a shared base class every Pricing Engine test now uses.

Infinite Blue (acquired by Everbridge)

Senior SDET (promoted Apr 2024) | Sep 2022 - Sep 2024

- Cut nightly regression time 85% (2h 30m to 20m) by researching and rolling out Cypress Cloud and integrating it with Harness CI/CD for parallel execution across machines.
- Led a GraphQL security audit using standardized Postman collections; found and fixed critical issues (XSS, access control) and presented findings to leadership.
- Built and grew a Cypress framework for a React Single-SPA application covering 10+ micro front-ends and 10+ microservices, with custom commands, page objects, stable data-attribute locators, and tag-based pipeline runs for single-service testing.
- Built a Jest and Axios API test framework for the Cenari public REST API, using Node-Vault to generate API keys, org IDs, and test credentials, with scripts to seed and clean up test data for consistent end-to-end runs.
- Ran performance and load tests with Artillery against public REST APIs under varied usage patterns; onboarded and mentored new SDETs and ran testing workshops for teams across the company, including Customer Support.

Everfi

Quality Engineer | Mar 2021 - Sep 2022

- Cut course development time from 3 days to half a day by building CLI automation tools and a shared NPM package of 20+ reusable functions for common Cypress interactions with course components.
- Automated 13+ Everfi courses in Test Modeller, all running in CI, within the first quarter; wrote code and model organization guidelines and mentored new teammates, interns, and developers.

Gannett | USA TODAY Network

Software Developer in Test | Jan 2018 - Mar 2021

- Shifted testing into development by teaching developers to use Simulato, a model-based testing tool that generates Selenium tests from models, reducing manual testing and technical debt and catching bugs earlier.
- Added security scanning to GitHub Actions with SonarQube, flagging vulnerabilities, bugs, lint errors, and outdated dependencies; created static fixtures to mock API calls for consistent visual and integration test data.
- Added Selenium visual tests to Jenkins, running in Docker containers as pipeline steps.

EDUCATION

Bachelor of Science in Software Development, Western Governors University

Associate of Applied Science in Information Systems Technology, Northern Virginia Community College
